May 2005

Since 2004, the Division of Commercial Fisheries has used the Fishery Management Report series. The Division of Sport Fish established the Fishery Management Reports series in 1989 for the publication of an overview of Division of Sport Fish management activities and goals in a specific geographic area. Fishery Management Reports are intended for fishery and other technical professionals, as well as lay persons. Fishery Management Reports are available through the Alaska State Library and on the Internet: <http://www.sf.adfg.state.ak.us/statewide/divreports/html/intersearch.cfm>. This publication has undergone regional peer review.

## ABSTRACT

The commercial salmon fisheries in the Kodiak Management Area (KMA) will be managed to promote maximum production opportunities for future KMA salmon returns by achieving salmon escapement goals. In addition, management will attempt to provide for orderly fisheries while maximizing harvest opportunities on the highest quality salmon, and will adhere to the biological and allocative requirements of the 10 Management Plans adopted by the Alaska Board of Fisheries for the KMA. Management follows a general chronology based on the run timing of four commercially targeted salmon species: sockeye *Oncorhynchus nerka*, pink *O. gorbuscha*, chum *O. keta*, and coho *O. kisutch* salmon.

Preseason forecasts for 2005 project a harvest of approximately 2,561,000 sockeye, 18,185,100 pink, 526,200 coho, and 1,169,600 chum salmon. Additionally, about 20,000 Chinook salmon *O. tshawytscha* could be harvested incidentally in fisheries targeting other species. All fishing periods are established by emergency order. The initial sockeye salmon commercial test fishery for westside Kodiak is scheduled for June 1. A June 1 fishery opening is also planned for the Foul Bay, and Waterfall Bay Special Harvest Areas. The initial commercial test fishery in the Alitak District may occur on June 5, which would be announced no later than June 3. The actual opening date for the Alitak District will be determined based on inseason indicators of run strength. Beginning July 6, weekly fishing periods targeting pink salmon will be 105 hours (4½ days) per week for Kodiak Archipelago sections and 57 hours (2½ days) per week for Mainland District sections north of Cape Aklek.

## INTRODUCTION

The Kodiak Management Area (KMA; Appendices A.1 – A.7) 2005 commercial salmon fishery harvest strategy emphasizes three criteria:

- (1) Promote maximum production opportunities for future KMA salmon returns by ensuring salmon escapements of sufficient magnitude and distribution.
- (2) Provide for orderly fisheries while maximizing harvest opportunities on the highest quality salmon.
- (3) Adhere to the biological and allocative requirements of all management plans adopted by the Alaska Board of Fisheries (BOF) for the KMA salmon fishery.

There are 10 management plans that direct management activities for specific portions of the KMA (Table 1). Every salmon fishing section within the KMA has a season-long regulatory management plan. Proper implementation of these plans requires a major effort in communication between Alaska Department of Fish and Game (ADF&G) and industry personnel.

Salmon run timing within the KMA follows a general chronology, by species (Figure 1). Commercial fisheries management is based on the run timing of four targeted salmon species: sockeye *Oncorhynchus nerka*, pink *O. gorbuscha*, chum *O. keta*, and coho *O. kisutch* salmon. Commercial salmon fisheries are structured around the seasonal abundance of salmon. Inseason adjustment in areas open to fishing and fishing time are dictated by escapement requirements (Nelson et al. *in prep*).

**Figure 1.**-Commercial salmon fishery chronology by species, for the Kodiak Management Area.

The KMA salmon fisheries are managed with data that is compiled and evaluated daily. Data used to make fishery management decisions include (1) escapement information from weir counts and/or aerial surveys, (2) harvest trends (total catch and fishery performance), and (3) information on fish abundance near spawning streams.

Management of major sockeye salmon runs is escapement based, and utilizes daily escapement information from up to seven salmon counting weirs. Management of smaller sockeye salmon runs also utilizes escapement information from salmon counting weirs when available, or other indications of run strength such as aerial or foot surveys.

The initial fishing periods for pink salmon are determined pre-season and weekly fishing period duration depends on the magnitude of the pink salmon forecast. Adjustments in weekly fishing time and areas open to fishing occur as the actual run strength becomes apparent through assessment of harvest and escapement estimates.

Chum and coho salmon management requires a combination or blend of these two approaches. Both species are initially harvested in directed sockeye or pink salmon fisheries. Terminal or near-terminal fisheries targeting chum or coho salmon require an assessment of actual run strength, using escapement counts from weirs or aerial surveys and current harvest information.

Commercial fisheries are not currently directed toward surplus Chinook salmon *O. tshawytscha*. Minor harvests of Chinook salmon occur during fisheries that are directed toward sockeye and pink salmon.

## **HARVEST PROJECTIONS**

Based on preseason projections, a total of approximately 20,000 Chinook, 2,561,000 sockeye, 526,200 coho, 18,185,100 pink, and 1,169,600 chum salmon should be available for harvesting throughout the KMA in 2005 (Table 2).

Of this total, the Kodiak Regional Aquaculture Association (KRAA) has forecasted the harvest of salmon returning to the Kitoi Bay Hatchery as approximately 10,185,129 pink, 152,154 coho, and 247,599 chum salmon. Additional enhanced salmon production, from projects conducted by KRAA and ADF&G, should contribute about 148,785 sockeye salmon to the common property fisheries (e.g., Spiridon Lake, Hidden Lake, etc.; Tables 2 and 3).

## **FISHING PERIODS**

All fishing periods will be established by Emergency Order (EO). The approximate initial opening dates and times for 2005 commercial fisheries in the KMA are listed in Table 4.

### **ADVANCE NOTICE**

For the initial sockeye salmon fisheries from June 1 to June 14, there will be at least 42 hours advance notice. All subsequent fishing periods will have at least 18 hours advance notice.

For the opening of the Cape Igvak Section (Appendix A.7) fishery, there will be at least 24 hours advance notice.

For the openings in the Inner or Outer Akalura, Inner or Outer Upper Station, or Dog Salmon Flats Sections (Appendix A.5), there will be at least 24 hours advance notice.

For adjustments to closed waters (increase or decrease), there will be at least 18 hours advance notice.

For extension of a previously announced fishing period, or for inperiod closure of an announced fishing period, there will be at least 3 hours advance notice.

### **FISHERY OPENING TIMES**

Most fishing periods open at 12:00 NOON and close at 9:00 PM, through August 15. Beginning on August 16, most fishing periods will close at 6:00 PM, instead of 9:00 PM.

There are several exceptions to this opening/closure schedule:

Cape Igvak fisheries open at 12:01 AM and close at 12:01 AM from June 5 through July 25. The 12:01 AM opening and closure time allows for more orderly fisheries due to the possibility of relatively short notice given for extensions of fishing periods.

Except for the initial commercial test fishery (June 5 to June 9), Cape Alitak, Alitak Bay, Moser Bay, and Olga Bay Section (Appendix A.5) fisheries will begin and end at different times through September 15, as follows:

In the Olga Bay Section, fishing periods open at 6:00 AM and shall close at 9:00 AM the following day<sup>1</sup>.

---

<sup>1</sup> Extensions are possible; any extension to fishing time will be in 24-hour increments.

In the Moser Bay Section, fishing periods open at 12:00 NOON and shall close at 3:00 PM the following day<sup>1</sup>.

In the Alitak Bay Section, fishing periods open at 6:00 PM. and shall close at 9:00 PM the following day<sup>1</sup>.

In the Cape Alitak Section, fishing periods open at 6:00 AM the day following the openings of the Olga Bay, Moser Bay, and Alitak Bay Sections, and shall close at 9:00 AM the following day<sup>1</sup>.

The Humpy-Deadman Section opens and closes at the same time as the Cape Alitak Section through July 15. From July 16 through August 15, fishing periods open at 12:00 NOON and close at 9:00 PM. Beginning on August 16, most fishing periods will close at 6:00 PM, instead of 9:00 PM.

Inner Ayakulik Section (Appendix A.4) fisheries usually begin near low tide. These will be daylight openings, and fishing begins when ADF&G personnel, located on the bluff northeast of the Ayakulik River mouth, launch a flare. When such openings occur, the opening time for the Outer Ayakulik Section may be adjusted to coincide with the Inner Ayakulik Section.

Inner Kitoi Bay Section (Appendix A.2) common property fisheries will usually begin between 12:00 NOON and 12:30 PM, when a flare is launched by hatchery staff within inner Kitoi Bay.

## **TIMING AND LENGTH OF INITIAL FISHING PERIODS**

### **Sockeye Salmon**

The first KMA commercial salmon fishery will begin at 12:00 NOON June 1 in the Central and North Cape Sections of the Northwest Kodiak District, in the Outer Karluk Section of the Southwest Kodiak District, and in the Foul Bay and Waterfall Bay Special Harvest Areas (SHAs) of the Afognak District. The initial June fishing period the Central, North Cape, and Outer Karluk Sections is considered a commercial test fishery, used to help gauge the strength of the sockeye salmon runs. Because of concerns about the possible harmful effects of excess early-run sockeye salmon escapement into the Karluk Lake system, it is the intent of ADF&G to try to curtail some of the very early returns of Karluk sockeye salmon.

**June 1 Commercial Fisheries.** Commercial salmon fishing will begin at 12:00 NOON Wednesday June 1, 2005, in the following management areas:

- The Central and North Cape Sections of the Northwest Kodiak District, and the Outer Karluk Section of the Southwest Kodiak District (Appendices A.3 and A.4) For these sections, this will be a 57-hour commercial test fishing period, from 12:00 NOON Wednesday June 1 through 9:00 PM Friday June 3. An extension of this period is unlikely, but will depend on escapement buildups in Karluk Lagoon. The commercial catch from this period will be used to assess the strength of the sockeye salmon run to the

---

<sup>1</sup> Extensions are possible; any extension to fishing time will be in 24-hour increments.

- The Central and North Cape Sections of the Northwest Kodiak District, and the Outer Karluk Section of the Southwest Kodiak District (continued)

Karluk system, with consideration of the Ayakulik, Frazer (Dog Salmon), and Upper Station sockeye salmon runs.

If the Karluk sockeye salmon early run is as strong as expected and timing is as early as in the past few years, additional fisheries in the Northwest Kodiak District and Outer Karluk Section can be anticipated.

- The Foul Bay and Waterfall Bay Special Harvest Areas (Appendix A.2)

These fisheries will be open continuously, beginning at 12:00 NOON Wednesday June 1, and will occur 24 hours per day, for as long as there are harvestable surpluses of salmon and orderly fisheries are occurring. Commercial fisheries in these management units target enhanced sockeye salmon production, and may extend through early July.

**June 5 to June 9 Commercial Fisheries:** Commercial salmon fishing is expected to begin between June 5 and June 9, 2005, in the following management areas:

- Inner Kitoi Bay, Outer Kitoi Bay, Duck Bay, and Izhut Bay Sections of the Afognak District (Appendix A.2)

These fisheries will open at 12:00 NOON Sunday June 5, and will remain open continuously, 24 hours per day, as long as there are harvestable surpluses of salmon and orderly fisheries are occurring. The fishery for the Kitoi Bay Hatchery early chum salmon runs may extend through late June, depending on chum salmon broodstock requirements and cost recovery needs.

- The Malina Creek Special Harvest Area (Appendix A.2)

This fishery may open at 12:00 NOON Sunday June 5, or earlier, should escapement exceed desired levels. Once the escapement goal is assured, fisheries will occur 24 hours per day, for as long as there are harvestable surpluses of salmon and orderly fisheries are occurring. Commercial fisheries in this management unit targets wild and enhanced sockeye salmon production, and may extend through early July.

- Cape Alitak, Humpy-Deadman, Alitak Bay, Moser Bay, and Olga Bay Sections of the Alitak District (Appendix A.5)

These fisheries may open at 12:00 NOON Sunday June 5 as a commercial test fishery, depending on early indications of sockeye salmon run strength to Frazer and Upper Station (including catches from the ADF&G Chip Cove test fishery and estimates of salmon buildup and escapement). If a commercial test fishery were allowed on June 5, it would be announced no later than June 3, and would be no more than 33 hours in length, with no extension. All sections would open and close concurrently, from 12:00 NOON Sunday June 5 through 9:00 PM Monday June 6.

If the Alitak sockeye salmon early runs are as strong as expected, additional fisheries should be anticipated.

- Cape Igvak Section of the Mainland District (Appendix A.7)

Chignik sockeye salmon are considered the principal stock harvested in the Cape Igvak Section. The timing of initial commercial fisheries in the Cape Igvak Section depends on the evaluation of the Chignik sockeye salmon run strength. If the Chignik sockeye early run is as strong as expected and timing is as early as in the past few years, the first Cape Igvak fishery should occur between June 5 and June 9. Fishing periods in the Cape Igvak Section will be in 24-hour increments, beginning at 12:01 AM.

If the Chignik sockeye salmon early run is as strong as expected, additional fisheries should be anticipated.

- Anton Larson, Sharatin Bay, Terror Bay, Inner Uganik Bay, Spiridon Bay, Zachar Bay, and Uyak Bay Sections of the Northwest Kodiak District (Appendix A.3)

These sections will open at 12:00 NOON Thursday June 9, for a 33-hour commercial test fishing period. Management of these sections is based on local chum or sockeye returns. Two commercial test fisheries are allowed before June 15, but must run concurrently with open fishing periods in the Central and North Cape Sections. A second commercial test fishery is scheduled for June 14.

**June 14 to June 21 Commercial Fisheries:** Commercial fisheries in the following management units may also occur on or after June 14, if escapement objectives are met or exceeded:

- Anton Larson, Sharatin Bay, Terror Bay, Inner Uganik Bay, Spiridon Bay, Zachar Bay, and Uyak Bay, of the Northwest Kodiak District (Appendix A.3)

These sections may open at 12:00 NOON Tuesday June 14, as a 33-hour commercial test-fishing period. Commercial test fisheries must run concurrently with open fisheries in the Central and North Cape Sections.

- Southwest Afognak, Perenosa Bay, Pauls Bay, and Northwest Afognak of the Afognak District (Appendix A.2)
- Eastside Kodiak District (Appendix A.6)
- Big River and Outer Kukak Bay Sections of the Mainland District (Appendix A.7)

Commercial salmon fishing will open at 12:00 NOON Tuesday June 14 for a 33-hour fishing period. This initial fishing period targets early-run sockeye salmon bound for Pauls, Portage, Thorsheim, Long Lagoon, Saltery, Ocean Beach, Swikshak, and/or Kafia Creeks. A second fishing period for minor sockeye salmon systems should occur on Tuesday June 21.

- Spiridon Bay Special Harvest Area (Telrod Cove; Appendix A.3)

The initial commercial salmon fishing period targeting enhanced sockeye salmon returning to Telrod Cove is not expected to occur prior to Monday, June 21. The actual starting date will depend on the salmon buildups in Telrod Cove and ADF&G's ability to monitor the commercial fisheries.

- Inner and Outer Ayakulik Sections of the Southwest Kodiak District (Appendix A.4)
- The Southeast Afognak Section of the Afognak District (Appendix A.2)

The initial fishing period in the Inner and Outer Ayakulik Sections and the Southeast Afognak Section is solely dependent on sockeye salmon escapement to the Ayakulik (Red) or Afognak (Litnik) systems, respectively. Small harvestable surpluses are projected, which could allow for short fisheries near the peak of the sockeye salmon runs.

Additional fishing time from mid-June to early-July will be based entirely on sockeye salmon run strength as determined by escapements, salmon buildups, and fishery performance. In order to maintain sockeye salmon escapements within established objectives, commercial fishing may be extended.

Directed commercial fisheries within the Inner Karluk Section (Appendix A.4) are solely dependent on Karluk River sockeye salmon escapement, and are only expected to occur if it appears likely that the Karluk sockeye salmon escapement goal will be exceeded.

For most late-run sockeye salmon stocks, a portion of the harvestable surplus is taken during fishing periods targeting pink salmon. Consequently, a blended management strategy is needed to ensure that escapements for each species are achieved. Commercial fisheries targeting Upper Station late-run sockeye salmon may begin August 10 and fisheries targeting Karluk late-run sockeye salmon may begin August 16.

### **Pink Salmon**

In addition to the three management criteria identified in the introduction of this document, the KMA harvest strategy for pink salmon also utilizes:

- a fixed opening date (July 6),
- pink salmon forecasts to set the length of the initial fishing periods, and
- coordination of multiple fisheries, whenever possible, to disperse the purse seine fleet.

The initial fishing periods will be 105 hours in length, except for the Mainland District fisheries. From July 6 to July 25, fishing time for that portion of the Mainland District north of Cape Aklek will not exceed 57 hours per week (this does not include the Cape Igvak or Wide Bay Sections, which are managed in accordance with the Cape Igvak Salmon Management Plan, 5 AAC 18.360.). During the peak harvest period, from late-July to mid-August, fishing periods may be adjusted to match the actual strength of the run. Below is a schedule of pink salmon fishing periods for the 2005 season, and is provided for industry and ADF&G planning purposes, especially for the first three fishing periods.

Changes to the following schedule should be expected if the actual overall pink salmon run is weaker than forecast. No extensions will occur during the first two periods. Extensions to later fishing periods may occur.

**First Period.** 105 hours - 12:00 NOON Wednesday July 6 through 9:00 PM Sunday July 10. Harvests during this period provide important data to assess early run strength of KMA pink and chum salmon stocks. There will be no extension in fishing time following this period. In the Mainland District north of Cape Aklek this period will only be 57 hours, from 12:00 NOON July 6 through 9:00 PM July 8.

**Second Period.** 105 hours - 12:00 NOON Tuesday July 12 through 9:00 PM Saturday July 16. During the second period, run strength for both pink and chum salmon will again be assessed from harvest data. There will be no extension in fishing time following this period. In the Mainland District north of Cape Aklek this period will only be 57 hours, from 12:00 NOON July 12 through 9:00 PM July 14.

**Third Period.** 105 hours - 12:00 NOON Tuesday July 19 through 9:00 PM Saturday July 23. The previous closures will likely allow an influx of pink and chum salmon into terminal closed areas, resulting in the build up of potential escapement. At this time, a combination of harvest and early escapement and/or buildup information should provide an indication of the actual run strength for major pink salmon stocks. In the Mainland District north of Cape Aklek this period will only be 57 hours, from 12:00 NOON July 19 through 9:00 PM July 21. In the Inner or Outer Kitoi Bay, Izhut Bay, or Duck Bay Sections, fishery restrictions may occur to meet hatchery cost recovery needs.

**Fourth Period.** 105 hours - 12:00 NOON Tuesday July 26 through 9:00 PM Saturday July 30. A fairly realistic estimate of the total run strength should be evident by the end of the period. The pink salmon harvest should increase during this period. If the pink salmon run is strong, extensions in fishing time will occur. In the Inner or Outer Kitoi Bay, Izhut Bay, or Duck Bay Sections, fishery restrictions may occur to meet hatchery cost recovery needs.

Subsequent fishing periods should follow the same weekly, Tuesday through Saturday, pattern unless escapement information indicates that an extension or reduction of fishing time is necessary. Fishing time will be based on pink salmon returns to individual systems. Differential fishing time, by management unit, may occur as stronger production areas are targeted, while moderate or lower production areas are provided additional protection. There may be changes in closed water sanctuaries to increase escapement levels or to harvest surplus salmon. Beginning approximately August 16, management emphasis will begin to shift toward the run strength of late-run Karluk and Upper Station sockeye salmon and late chum salmon.

From July 20 through August 31 there may be cost recovery fisheries for the Kitoi Bay Hatchery. These cost recovery fisheries will primarily occur within the Inner Kitoi Bay Section, but may also expand into the Outer Kitoi Bay Section. There may be restricted fishing time in the Izhut Bay and Duck Bay Sections during this time period, to allow fish to move into the Kitoi Bay Sections for cost recovery and broodstock needs.

### **Chum Salmon**

The supplemental Kitoi Bay Hatchery chum salmon run is projected to be strong this season. Extended fishing time in the vicinity of the hatchery should be expected in June and early July.

With the exception of chum salmon returning to the Kitoi Bay Hatchery, a major portion of the 2005 chum salmon harvest will occur in non-terminal locations during directed sockeye and pink salmon fisheries. The initial fishing periods targeting chum salmon will begin on July 6, and will follow the same opening dates and times as those for pink salmon. System-specific chum salmon fisheries that occur during the pink salmon fishery may result in some management units (such as the Kizhuyak Bay, Sturgeon, Spiridon Bay, Zachar Bay, Inner or Outer Kukak, or Outer Ugak Bay Sections) having more or less fishing time than those targeting primarily pink salmon stocks. Again, from July 6 to July 25, fishing time for that portion of the Mainland District north of Cape Aklek will not exceed 57 hours per week. Additional fishing time after July 25 for that portion of the Mainland District north of Dakavak Bay will depend on assessment of local pink and chum salmon runs. Chum salmon run strength will be assessed primarily from aerial surveys and harvest data.

### **Coho Salmon**

Initially, coho salmon harvests will occur in non-terminal locations during directed pink salmon fisheries. System-specific coho salmon fisheries may occur during the pink salmon fishery, and may result in some management units having more or less fishing time than those primarily targeting pink salmon stocks (such as the Pauls Bay, Perenosa, Zachar Bay, or Inner Ayakulik Sections). Coho salmon run strength will be assessed from weir escapements, aerial surveys, and harvest data.

A directed coho salmon fishery in the Pauls Bay Section will begin on August 1. Directed coho salmon fisheries in the Shuyak Island Section may also begin on August 1. The supplemental Kitoi Bay Hatchery coho salmon runs have been successful over the past several years, and are projected to be strong again this season. Additional fishing time in the vicinity of the hatchery should be expected in early September once pink salmon broodstock requirements are assured.

After September 10, coho salmon fishing may be allowed in the Settler Cove Special Harvest Area if at least 500 coho salmon are available for harvest.

### **INPERIOD CLOSURES**

From July 6 through July 25 there are limits on the number of sockeye salmon that may be harvested in areas bordering the North Shelikof Strait (5AAC 18.363). Purse seine permit holders operating in the North Shelikof Strait from July 6 to 25 are advised that inperiod closures of designated Seaward Zones will likely occur (Appendices A.2 and A.7). Since the plan went into effect (1990), Seaward Zone closures have occurred every year except 1991 and 2000.

Seaward Zone closures, if required, will be announced on single side band radio (SSB) frequency 4.125 MHz, from the ADF&G office in Kodiak and on VHF 6 and SSB frequency 4.125 MHz from the *R/V K-Hi-C* on the fishing grounds. Inperiod Seaward Zone closures announcement times will be 8:30 AM, 10:00 AM, 2:00 PM, or 5:00 PM. There will be at least 3 hours advance notice given for Seaward Zone closures.

### **INSEASON EMERGENCY ORDER ANNOUNCEMENTS**

After enough information has been collected to determine the fishing time needed to harvest surplus fish, a fishery announcement (news release) will be issued in the following manner:

- (1) A news release (NR) will be issued that details:
  - (a) the date, time, and number of the emergency order announcement,
  - (b) the length of the fishing period,
  - (c) the opening and closing times and dates of the fishing period,
  - (d) the areas opening to fishing,
  - (e) the areas closing to fishing,
  - (f) the location of closed water adjustments (if any), and
  - (g) a list of any previous news release information that is still pertinent.
- (2) The NR will be posted at the main entrance of the Kodiak ADF&G office at 211 Mission Road. Copies of the NR will be available outside the main entrance, and in the Kodiak ADF&G office during regular office hours (Monday through Friday, 8:00 AM to 4:30 PM).
- (3) The NR (fishery announcement) will be recorded on a 24-hour recorded message phone (486-4559).
- (4) The NR will be made available to local radio stations (KVOK-AM / KRXX-FM and KMXT-FM).
- (5) The Kodiak ADF&G management staff will monitor SSB radio channel 4.125 MHz (call sign WHM 29), SSB channel 3.230 MHz (call sign WON 32), and Matrix satellite phone dispatch number 7410, during regular office hours, and will reply to public and industry inquiries.
- (6) The NR will be distributed to all registered processors by fax, email, telephone, hand delivery, or through the ADF&G recorded message phone.

- (7) Copies of EOs, which detail specific regulation changes and justifications, will be available to interested recipients.

Fishery announcements are generally very detailed and complicated. It is advised that tender operators and permit holders obtain a written copy, or use a tape recorder to document the exact wording of each announcement as it is broadcast.

## **ADF&G STAFF CONTACT NUMBERS**

ADF&G Kodiak management staff is available to answer questions regarding commercial salmon fishery regulations, openings, closures, and harvests.

General Information - 486-1830

Matrix Dispatch - 7410

Kevin Brennan - 486-1808

Dennis Gretsich - 486-1804

Jeff Wadle - 486-1807

After Hours Cell Phone - 654-1830

Record-a-Phone - 486-4559

## **NOTABLE REGULATIONS AND RECENT CHANGES**

The Alaska Board of Fisheries (BOF) met in Anchorage during January 2005 to discuss Kodiak salmon fishery regulations. The BOF amended the KMA salmon season to allow June 1 fishery openings. Several additional changes were made that will be in effect for the 2005 commercial salmon fishery. A synopsis of several important regulations and regulation changes follows, but all participants in the Kodiak commercial salmon fishery are urged to make themselves aware of all applicable regulations. Copies of the KMA commercial salmon fishery regulations and the most recent Kodiak Area Salmon Statistical Chart are available at the Kodiak ADF&G office. It is important to get the latest edition of the statistical chart for the 2005 season, as there were many closed water and section line changes established for the 2005 season. All latitude and longitude coordinates in Kodiak Area regulations have been converted to decimal minutes and are based on the North American Datum of 1983. All latitude and longitude coordinates are measured using GPS technology.

### **SPECIAL HARVEST AREAS**

Special Harvest Areas (SHAs) are used to concentrate fishing effort in a very specific location to harvest a particular salmon run, usually near the mouth of the salmon's natal stream. SHAs are usually associated with rehabilitated or enhanced salmon runs. They are used to maximize harvest opportunities on specific salmon runs while minimizing the harvest of other salmon stocks. There are usually substantial reductions in normally closed waters that are located within the SHA boundaries. There are many times during the salmon season when a district or section containing a SHA is open to fishing without the SHA being specifically open to fishing by EO. When a district or section is open by EO without specifically mentioning the SHA, all waters of the SHA, except for the normally closed waters, are also open to fishing.

### **SECTION LINES**

There have been several changes to section lines and closed water lines. Previous statistical maps are outdated and should not be used for the 2005 KMA commercial salmon season. Revised statistical charts are available in the Kodiak ADF&G office. Section line changes include:

- (1) Duck Bay/Izhut Bay Sections: The boundary line between these two sections has changed slightly at Peril Cape. The new coordinates for Peril Cape are 58° 08.06' N lat., 152° 20.55' W long. (old coordinates - 58° 07.50' N lat., 152° 16.30' W long.).

- (2) Southeast Afognak/Duck Bay Sections: The boundary line between these two sections has changed at Cape Kostromitinof, from a latitude (east-west) line to a longitude (north-south) line. The new coordinate is the longitude of Cape Kostromitinof at 152° 33.40' W long. (old coordinate - 58° 05.00' N lat.).
- (3) Inner Karluk/Sturgeon Sections: The boundary line between these two sections has changed at Cape Karluk, with the line moving further south. The new coordinate is the latitude of Cape Karluk at 57° 34.20' N. lat. (old coordinate - 57° 34.70' N lat.).

## **CLOSED WATER AREAS**

There have been many changes to closed water area boundaries. In many cases, areas where only ADF&G regulatory markers designated the closed water sanctuary, there are now legal descriptions of the closed waters in regulations. Many closed water boundaries were changed from point to point lines to more easily identifiable latitude and longitude descriptions (i.e. south of XX° N lat. and west XXX° W long.). Significant closed water area changes were made in all districts. A packet of maps showing details of closed water changes is available at the Kodiak office.

All freshwater streams and rivers of the KMA are closed to commercial salmon fishing. Additionally, adjacent to streams and rivers, all saltwater within 500 yards of the seaward extremities of the exposed tideland banks is closed to commercial salmon fishing, unless:

- (1) Alternatives are specifically listed in the regulation book (see 5 AAC 18.350. CLOSED WATERS); or
- (2) The stream number is circled on the most recent version of the salmon statistical chart, issued annually by ADF&G. For streams with circled numbers commercial salmon fishing is allowed to the stream terminus; or
- (3) Specifically reduced or increased inseason by EO at a particular stream or bay (announced by NR); or
- (4) Closed waters markers are in place. The intent is to maintain a 500-yard closed water area from the stream terminus, at all stages of the tide, unless the area is made larger or smaller by regulation or EO. If closed waters markers are in place, the closure line may be a straight line or may be an arc, as follows:
  - (a) The closure line is a straight line between two regulatory markers if specifically stated in regulation or EO, or if, at all stages of the tide, the markers are farther than 500 yards from the seaward extremities of the exposed tideland banks of the salmon streams located inside the markers.
  - (b) The closed water line will be an arc if necessary to maintain the 500-yard distance from the seaward extremities of the exposed tideland banks of the salmon stream at any stage of the tide. Then, waters closed to salmon fishing will be a line arcing from the markers to a point 500 yards directly off the seaward extremities of the exposed tideland banks that designates the stream mouth. The actual shape of the closed water area will change as the tide ebbs and floods.

As stated in 5 AAC 18.350. CLOSED WATERS. (b). ... If the location of a regulatory marker is in conflict with the closed waters listed in this section, it is illegal to fish on the streamward side of that marker. There will be no inseason adjustments of closed water markers unless ADF&G personnel are available to remove the normal markers, install new

markers, and subsequently reinstall the normal markers. There will be at least 18 hours advance notice prior to adjusting closed waters.

There have been no changes made to closed waters in the Pauls Bay Section (Appendix A.2). After August 1, if interim coho salmon escapement objectives are being exceeded in the Pauls Bay/Laura Lakes system, closed waters in the Pauls Bay Section may be reduced to a straight line from 58° 23.70' N lat., 152° 20.80' W long. to 58° 23.29' N lat., 152° 21.09' W long.

### **Additional Closed Water Sanctuaries for the 2005 Season**

In addition to the closed water areas listed in the regulations (5 AAC 18.350), the following two closed water sanctuaries will be in effect for the 2005 season:

#### **Buskin River Closed Water Sanctuary**

The stream mouth of the Buskin River (stream #259-211) moves considerably from year to year. The north shore marker has been placed further up the beach and an offshore point has been designated to aid in triangulation of the closed water area. The offshore point is at the reef directly east of the spit, and may be marked with a buoy. This closed waters area is in effect for subsistence and commercial fisheries. The location of the closed waters will be described in the first salmon EO as follows:

5 AAC 18.350 CLOSED WATERS (a)(4) Northeast Kodiak District. (E) Buskin River: all waters inside of a line running from a marker on the bluff north of the mouth of the Buskin River at approximately 57° 45.88' N lat., 152° 28.33' W long. to a point offshore at 57° 45.35' N lat., 152° 28.15' W long., to a marker located onshore south of the river mouth at approximately 57° 45.11' N lat., 152° 28.81' W long.

#### **Ayakulik River Closed Water Sanctuary**

Should commercial fishing be allowed in the Inner Ayakulik Section, ADF&G regulatory markers will be placed in such a manner as to better define the stream terminus of the Ayakulik River. Two markers shall be placed on each side of the river mouth. Aligning the front marker with the back marker on each side triangulates the closed water area. The intent of this closed water sanctuary is to prevent fishing gear from being set to completely block access to the river for migrating fish.

### **RELEASE OF LARGE CHINOOK (KING) SALMON BY PURSE SEINE FISHERMEN**

ADF&G can now require that fishermen release large Chinook salmon (greater than 28 inches in length) from their catch. Any king salmon greater than 28 inches would have to be released unharmed, immediately. This would apply only in the Inner Karluk, Outer Karluk, Inner Ayakulik, or Outer Ayakulik Sections, and only if the department determines that the Karluk or Ayakulik king salmon runs will not meet seasonal escapement goals.

### **USE OF NET PENS**

Floating net pens may be used in the KMA to hold live commercially caught salmon prior to processing. However, any fishermen that wish to use a net pen must obtain a permit at the Kodiak ADF&G office. The permit will outline restrictions, conditions, and reporting requirements. It is the responsibility of the permit holder to obtain any additional licenses or permits that may be required. Permits are available at the ADF&G Kodiak office. Any fishermen that wishes to use a net pen should contact salmon management staff at the Kodiak Fish and Game office.

## **WASTE OF SALMON**

Waste of salmon will not be tolerated and may result in fishing period closures (AS 16.05.831 and 5 AAC 93.310). Salmon taken commercially may be used or sold as bait (5 AAC 93.350).

## **PERSONAL USE OF COMMERCIALY TAKEN SALMON (HOME PACK)**

It is legal for commercial fishermen to keep for their own use salmon legally taken in their commercial gear during open commercial fishing periods (home pack). However, the number of fish harvested and kept for home pack must be reported on a fish ticket. These fish may not be sold or bartered (5 AAC 39.010).

At the next delivery, record the number of each species of salmon caught but not sold in the lower right hand corner of the fish ticket, in the space designated for that purpose.

## **DIRECT MARKETING**

There has been an increase in interest by Kodiak commercial salmon fishermen in marketing their own lawfully taken commercial catch (direct marketing). In the Kodiak Area, the amount of salmon being harvested, custom processed, and kept by local fishermen, has increased dramatically over the past several years. If such fish is to be sold later for human consumption, then the commercial fishermen must be properly registered and licensed. There are several ways to legally market your own fish, but some require special registration and licensing. Registration and licensing ensures accurate reporting of harvests, which is essential for sound management of commercial fisheries.

Direct marketers are responsible for filing their own fish tickets with ADF&G and may be required to complete a Commercial Operators Annual Report. Direct marketers must also register with the Department of Fish and Game salmon management office in Kodiak.

## **FISH TRANSPORTERS**

A fish transporter differs from a tender. A tender acts as the agent of a registered processor or buyer, and is the first point of sale of fish from the CFEC permit holder to that processor or buyer. A fish transporter is an agent of the CFEC permit holder(s), and is authorized to take legally harvested fish from one or more commercial salmon fisherman to a buyer or buyers. A fisherman or group of fishermen may hire a fish transporter, who may then legally take their fish to the first point of sale.

A Fish Transporter Permit is required, and must be in possession of the operator during the transport and sale of fish. The ADF&G Division of Commercial Fisheries in Juneau issues Fish Transporter Permits. All fish transporters must also be registered with the ADF&G Kodiak commercial salmon fishery management staff. The transporting vessel used must be licensed as a commercial fishing vessel and all people working aboard the vessel must have crewmember licenses.

Fish transporters are required to report their activities to ADF&G and to fill out a fish ticket for all fish taken aboard their vessel. The commercial fisherman who caught the salmon is required to provide the fish transporter with fish ticket information such as the CFEC permit number, the area of harvest, catch dates, and catcher vessel ADF&G number, and must sign the fish ticket. The number of fish by species and the weight of the fish by species must be estimated and recorded on the fish ticket. Final weights and fish counts will be verified upon delivery of the fish to the buyer or processor. The buyer or processor submits the finalized fish ticket to ADF&G.

Additional information and Fish Transporter Permit applications are available from the ADF&G Kodiak staff or by calling (907) 465-6131.

## **FISH TICKETS / HARVEST REPORTS**

It is the legal responsibility of commercial fishermen, tenders or transporters, and processors and buyers to assure that all information on a fish ticket is complete and correct. Prior to completing and signing fish tickets, permit holders, tender operators, and/or processing personnel should make sure that the proper harvest information has been entered by statistical area, and the fish ticket is completely and accurately filled out.

### **PROCESSORS / TENDERS**

Management of the KMA commercial salmon fishery requires timely, accurate harvest reporting. Without accurate information a more conservative harvest strategy will be adopted and less fishing time will be allowed. Processors and buyers are required to accurately report catches daily to ADF&G (5 AAC 39.130 (a)(3)).

Catch reports must include the estimated number of salmon harvested by species, for each gear type from each major catch area (by statistical area, or by geographic area such as a bay, cape, or headland). ADF&G management staff will contact processors to arrange the daily reporting times and format. Daily reports can be made verbally, by fax, or by email. Processors should obtain correct, up to date, information from tender operators prior to providing daily reports to ADF&G.

Each day, tender operators must provide their processing companies with an accurate count of deliveries and number of salmon delivered, by species and by catch area. Alternately, tender operators may report, the total number of pounds and the average weight by species, by catch area.

Statistical area numbers are used to record harvest location(s) on fish tickets. Be sure that the location of the catch, rather than the location of the tender pick-up, is recorded on the fish ticket.

The correct harvest location and number of fish harvested by species must be recorded on each fish ticket. This information is extremely important in evaluating inseason harvests, stock contribution, and effort distribution. In order to provide maximum allowable fishing time, especially in areas such as the Cape Igvak Section and the north Shelikof Strait, it is imperative that the correct statistical areas and numbers of fish by species are reported on the fish ticket at the time of delivery.

### **PURSE SEINE FISHERMEN**

Be certain that your fish tickets show the number of fish of each species, or the total weight and average by species, for your delivery. Purse seine permit holders must, at a minimum, provide estimates of harvest by statistical area to tender operators. For example: "1/3 of my sockeye were from Cape Alitak (257-20) and 2/3 were from Outer Ayakulik (256-20). The rest of my fish were 1/2 and 1/2 from each of those two areas". Do not record the location of the tender as the harvest location.

### **GILLNET FISHERMEN**

Again, make sure your fish tickets show the number of fish of each species, or the total and average weight by species, for your delivery. Because of the fixed nature of set gillnet gear, each permit holder's reporting area (statistical area) is usually consistent between landings. In the

event that you move a gillnet into a new statistical area, make sure the tender operator is provided with that information.

<b>GRAND TOTAL<sup>q</sup></b>	<b>23,891,000</b>	<b>27,247,200</b>	<b>22,461,900</b>

<sup>a</sup> In number of salmon (rounded to nearest hundred). Does not include subsistence, sport, personal use, or ADF&G test fish harvests.

<sup>b</sup> Projected harvests for enhanced and major sockeye systems are based on the formal forecasts for those individual stocks (total run minus escapement) and the projected harvest from minor sockeye systems and other salmon species are based on less formal escapement to return relationships. The 2005 sockeye salmon harvest should be greater than forecast, based on past forecasting performance.

<sup>c</sup> Actual harvest is the number taken in a particular geographic area, not the catch assigned to an individual salmon stock.

<sup>d</sup> From the Duck Bay, Izhut Bay, and Inner and Outer Kitoi Bay Sections only. Additional salmon, likely bound for the Kitoi Bay Hatchery, are harvested in parts of the Southeast Afognak Section (252-33) and Northeast Afognak Section (252-10 and 252-20).

<sup>e</sup> From the Cape Igvak Section. Early run is from the beginning of season through June 26. Late run is from July 8 through 25.

<sup>f</sup> From the Southwest Afognak Section, Northwest Kodiak District (except for Spiridon and Settler Cove Terminal Harvest Areas), Inner and Outer Karluk Sections, plus 50% of Halibut Bay Section from June 21 through July 15 and 100% after July 31.

<sup>g</sup> From the Outer and Inner Ayakulik Sections, plus 50% of Halibut Bay Section from June 21 through July 15 and 100% from July 16 through 31.

<sup>h</sup> From the Alitak Bay District. Frazer and Upper Station harvest estimates are based on initial run and fishery timing and stock separation.

<sup>i</sup> From minor systems at Inner and Outer Ugak Bay (Saltery), Buskin River, Perenos Bay (Portage), Northwest Afognak (Thorsheim & Long Lagoon), Big River (Swikshak), and Outer Kukak Bay (Kaflia & Kuliuk) Sections.

<sup>j</sup> From the Foul Bay, Waterfall Bay, and Settler Cove Special Harvest Areas. Enhancement project sockeye salmon production is expected from the Malina and Laura Lakes (Pauls Bay) systems, but is mixed with wild stock production from these minor systems.

<sup>k</sup> From the Spiridon Lake Special Harvest Area (Telrod Cove), plus an estimate of Spiridon-bound sockeye taken in adjacent areas.

<sup>l</sup> From the Afognak District except for the Duck, Izhut, and Inner and Outer Kitoi Bay Sections.

<sup>m</sup> From the Southwest Kodiak District (256- and 255-) and the Northwest Kodiak District (254- and 253-) except for the North Cape, Anton Larson, Sharatin, and Kizhuyak Section, and part of the Central Section (259-35 to 259-39).

<sup>n</sup> From the Alitak District.

<sup>o</sup> From the Eastside Kodiak District (258-, and 259-40 to 259-42), Northeast Kodiak District (259-21 to 259-25), and the North Cape, Anton Larson, Sharatin, and Kizhuyak Sections, plus part of the Central Section (259-35 to 259-39).

<sup>p</sup> From the Mainland District.

<sup>q</sup> Includes the projected 2004 harvest of 20,000 Chinook salmon, the actual 2004 harvest of 28,900 Chinook salmon and a projected 2005 harvest of 20,000 Chinook salmon.

**Table 3.-**Forecast of the 2005 salmon runs and expected number available for harvest from KRAA stocking projects.

System	Species	Forecast			Expected Harvest
		Estimate	Low	High	
Spiridon Lake <sup>a</sup>	sockeye	103,662	61,330	144,660	103,662

<sup>a</sup> Barrired systems and/or with Special Harvest Areas.

<sup>b</sup> Estimated returns to Little Waterfall and Big Waterfall Creeks are combined.

<sup>c</sup> Pink, chum and coho salmon forecast estimates include brood stock needed for the Kitoi Bay Hatchery program where as the expected harvest estimates do not include the needed brood stock.

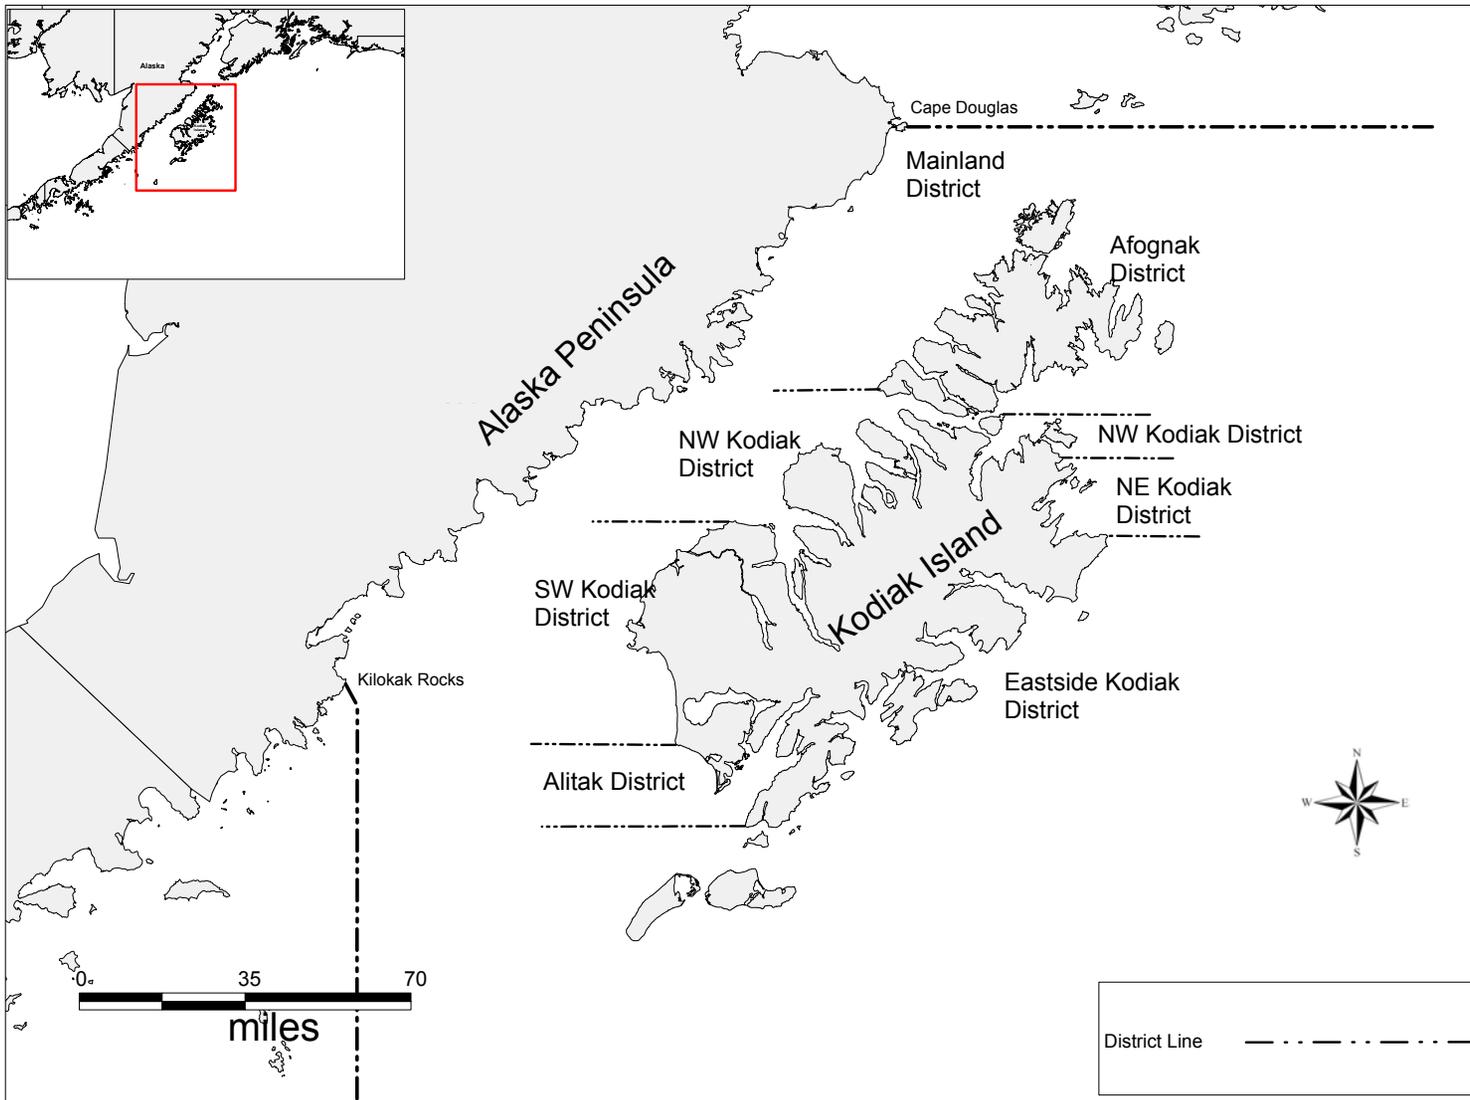

<sup>d</sup> Includes the expected returns from Jennifer and Ruth Lakes stocking program.

**Table 4.-Commercial salmon season opening times and dates for early sockeye salmon fisheries in the Kodiak Management Area, 2005.**

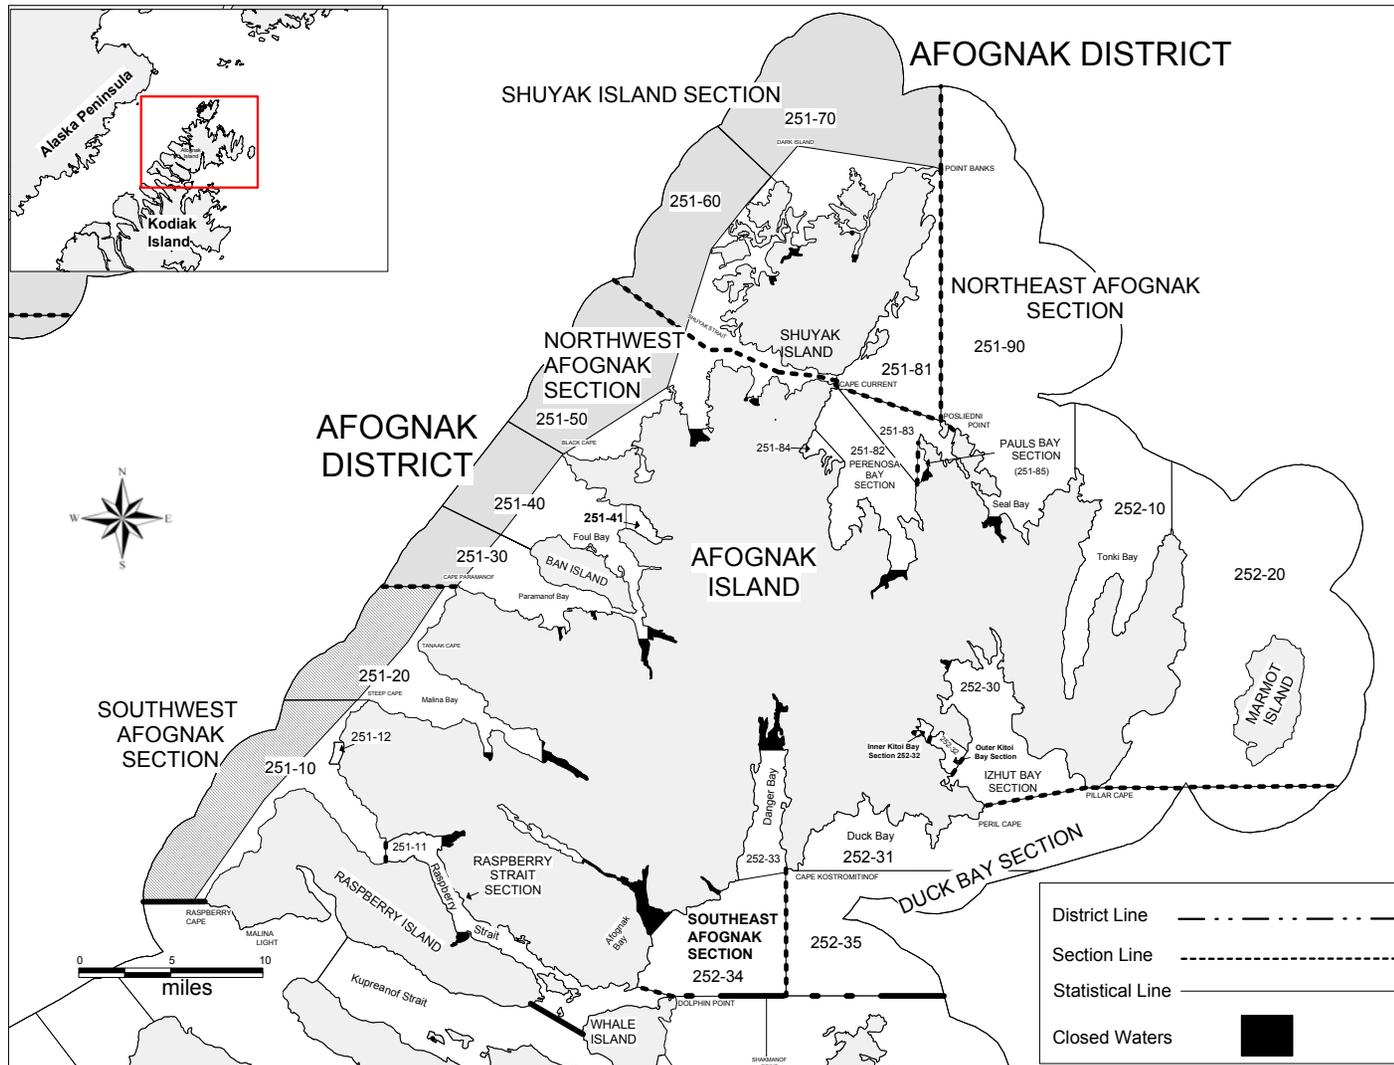

FISHERY	EARLY SALMON FISHERY OPENING TIME & DATE	
	Firm Time & Date	Approximate Time /Date
<b>Early Sockeye Salmon Fisheries</b>		
Central, North Cape, and Outer Karluk Sections <sup>a</sup>	12:00 NOON June 1	-
Foul Bay and Waterfall Bay Special Harvest Areas <sup>b</sup>	12:00 NOON June 1	-
Kitoi Bay Hatchery - (Duck, Izhut, and Kitoi Sections) <sup>b</sup>	12:00 NOON June 5	-
Malina Creek Special Harvest Area		12:00 NOON June 5
Alitak Bay District <sup>c</sup>		12:00 NOON June 5
Cape Igvak Section <sup>d</sup>	-	12:01 AM June 9
Remainder of NW Kodiak District (except Kizhuyak Sections) <sup>e</sup>	12:00 NOON June 9	-
SW Afognak Section <sup>f</sup>	12:00 NOON June 14	-
Inner and Outer Ayakulik Sections <sup>g</sup>	-	Low Tide June 21
Spiridon Bay Special Harvest Area (Telrod Cove)	-	12:00 NOON June 21
<u>Minor Systems<sup>f</sup></u>		
Uganik (Inner Uganik Section)	12:00 NOON June 9	-
Saltery (Inner Ugak Section)	12:00 NOON June 14	-
Paramanof (NW Afognak Section)	12:00 NOON June 14	-
Swikshak (Big River Section)	12:00 NOON June 14	-
Kafliia (Outer Kukak Section)	12:00 NOON June 14	-
Pauls/Perenosa (Pauls and Perenosa Bay Sections)	-	12:00 NOON June 14

- a This is considered a commercial test fishery, beginning 12:00 NOON June 1. Extension of this fishing period is not expected, but will depend on sockeye salmon escapement into the Karluk system.
- b These areas will be open continuously, 24 hours per day, for as long as orderly fisheries are maintained and enhancement project salmon are available for harvest. There will be closures in late July and August in Kitoi Bay Hatchery management units, to assure cost-recovery and broodstock needs are met.
- c Approximate opening time/date is as shown. Sockeye salmon escapements, build-ups, and Chip Cove test-fishery catches will determine actual fishery opening date. The initial fishery is considered a commercial test-fishery with a maximum fishing time of 33 hours. There will be no extension of the initial commercial test-fishery opening. Also, for the initial commercial test fishery all sections will open and close at the same time; subsequent fishing periods will have different opening and closing times for each section, as specified in 5 AAC 18.361.
- d Approximate opening time/date is as shown. The opening date will be determined by Chignik sockeye salmon escapement and the achievement of allocative criteria (the anticipated harvest) in the Chignik Management Area. Fishing time will be in 24-hour increments, beginning at one minute after midnight (12:01 AM).
- e Approximate opening time/date is as shown. Strong early runs to local streams or very strong early runs to major sockeye salmon systems could allow for an earlier opening date.
- f Actual opening time/date is shown for some minor systems, approximate opening time/date is shown for other minor systems.
- g Approximate opening time/date is as shown. The sockeye salmon escapement into the Ayakulik River will determine fishery opening time/date. The opening will occur during daylight hours near low tide; Inner Ayakulik Section openings normally begin with a flare.

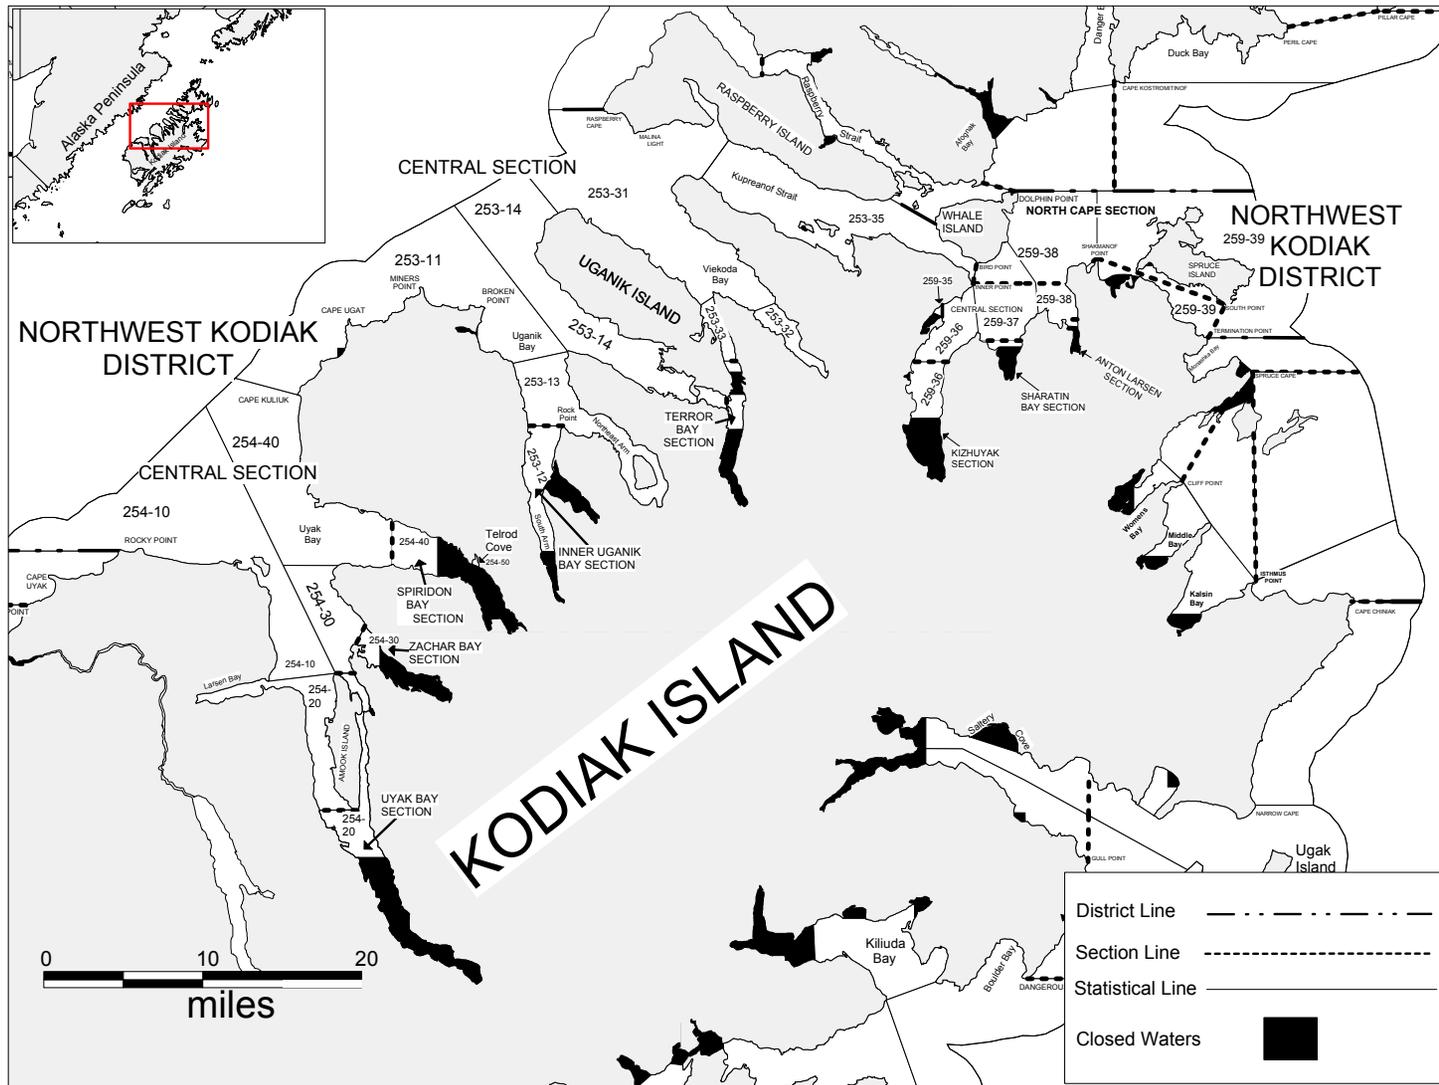

**APPENDIX A. MAPS OF THE KODIAK MANAGEMENT AREA  
SALMON FISHING DISTRICTS**

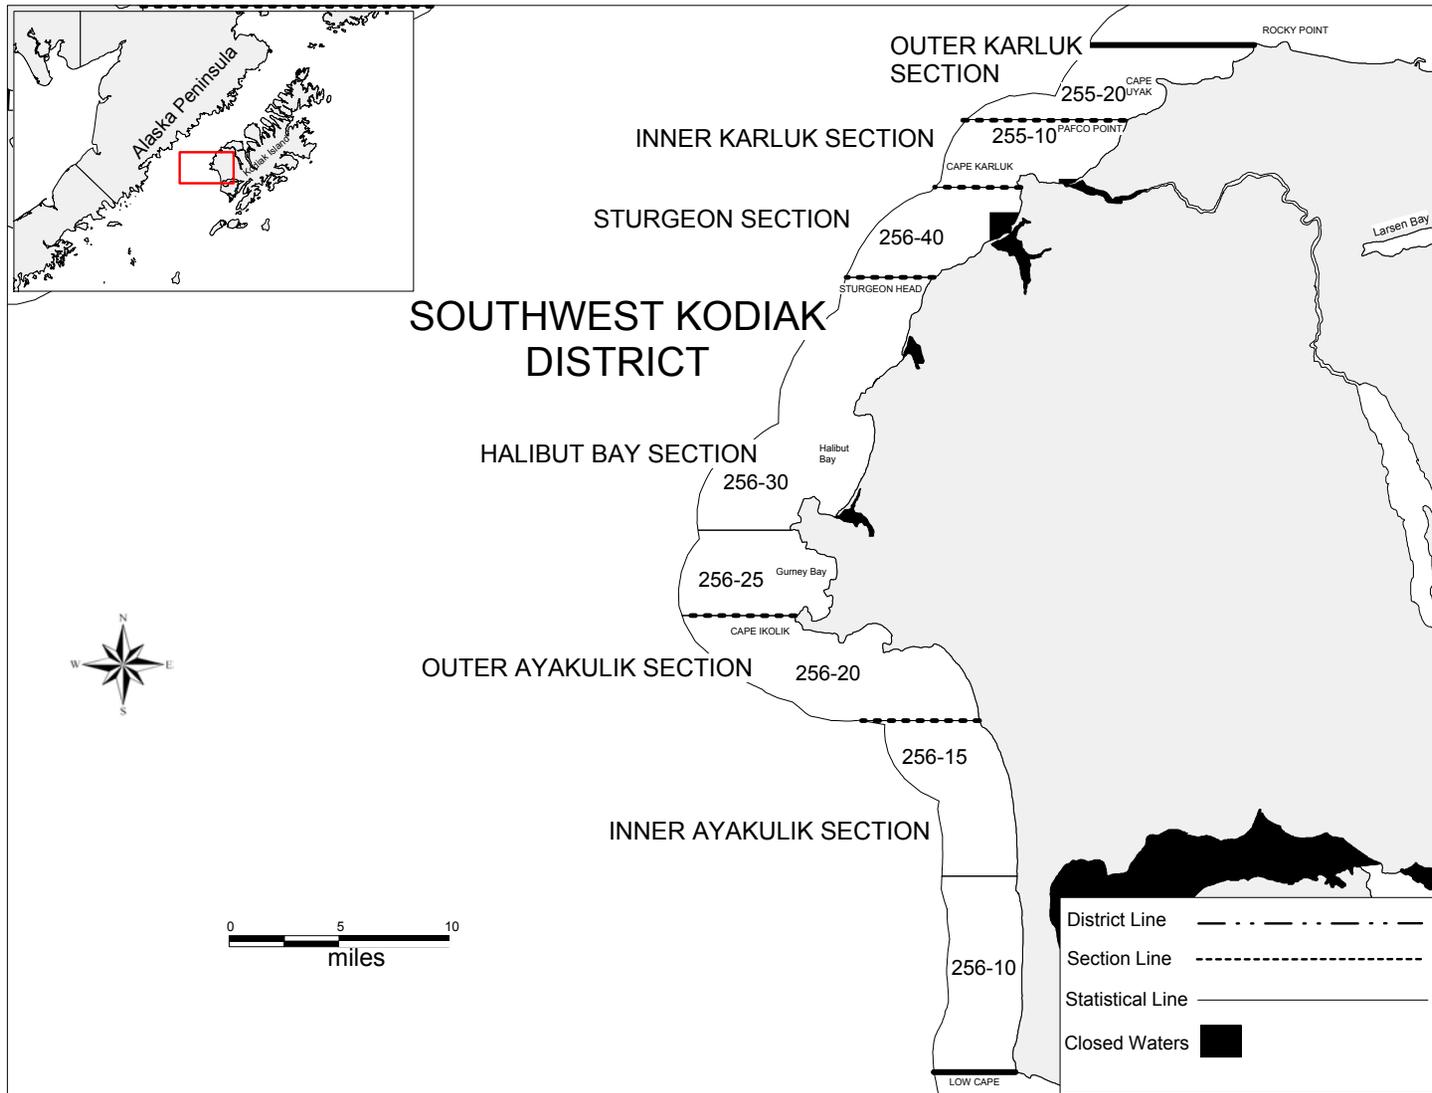

**Appendix A1.-**Map of the Kodiak Management Area identifying commercial salmon fishing districts.

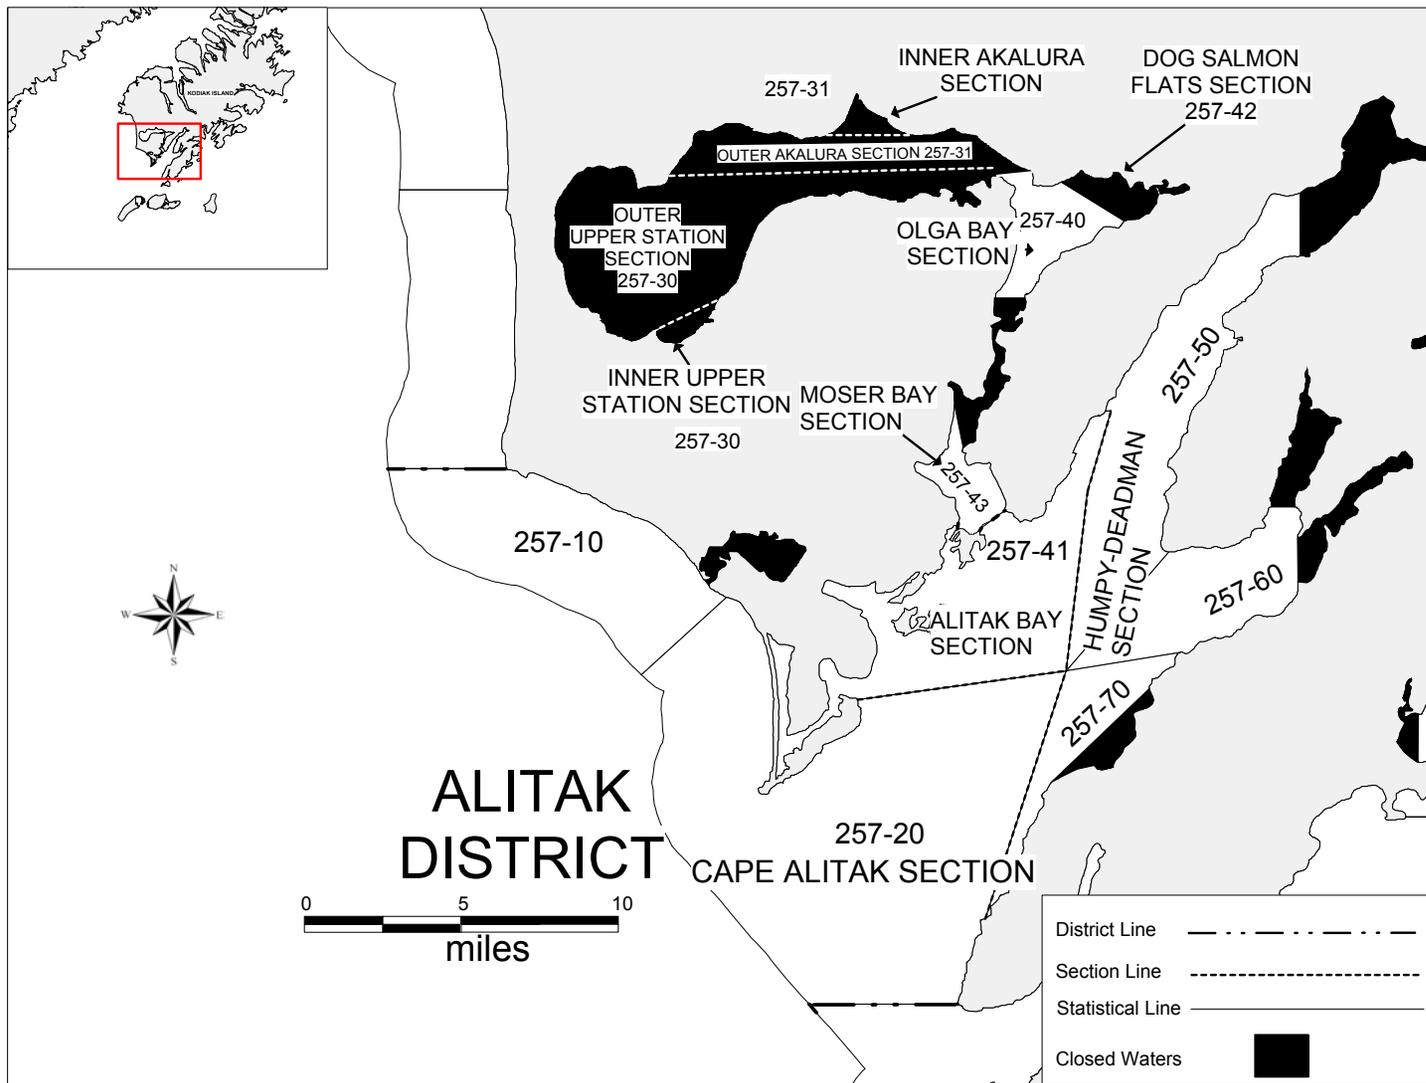

Appendix A2.-Map of the Afognak District identifying commercial salmon fishing sections and statistical areas.

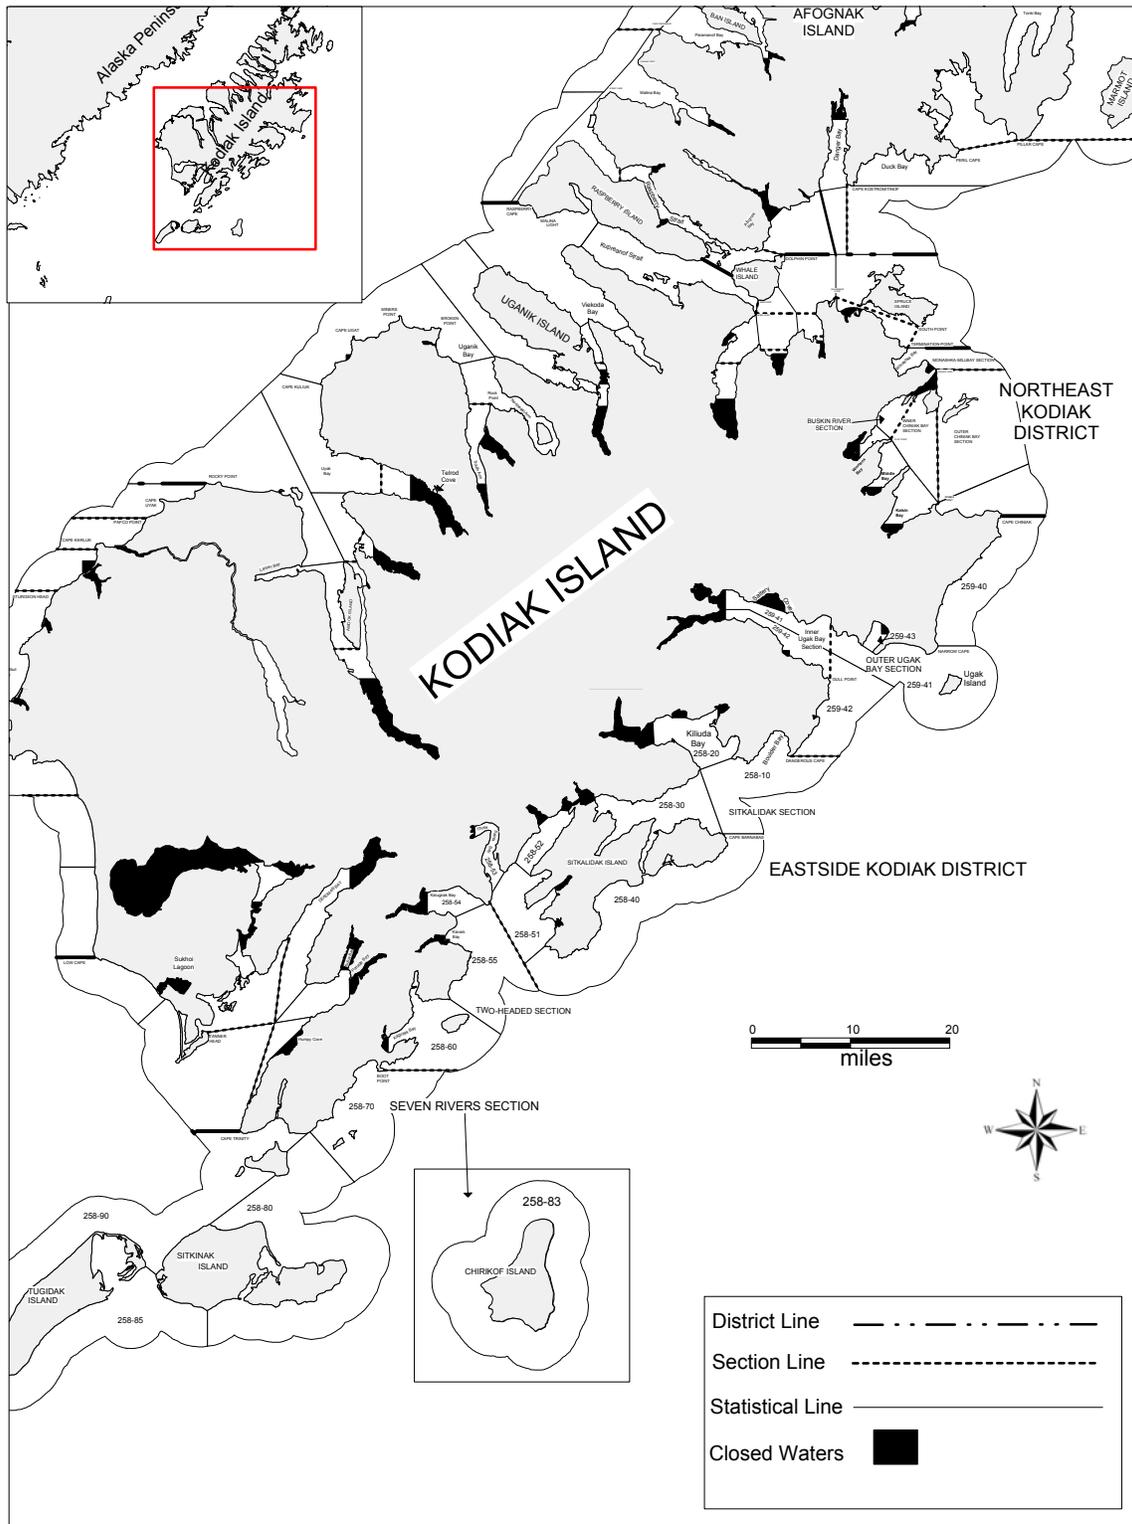

Appendix A3.-Map of the Northwest Kodiak District identifying commercial salmon fishing sections and statistical areas.

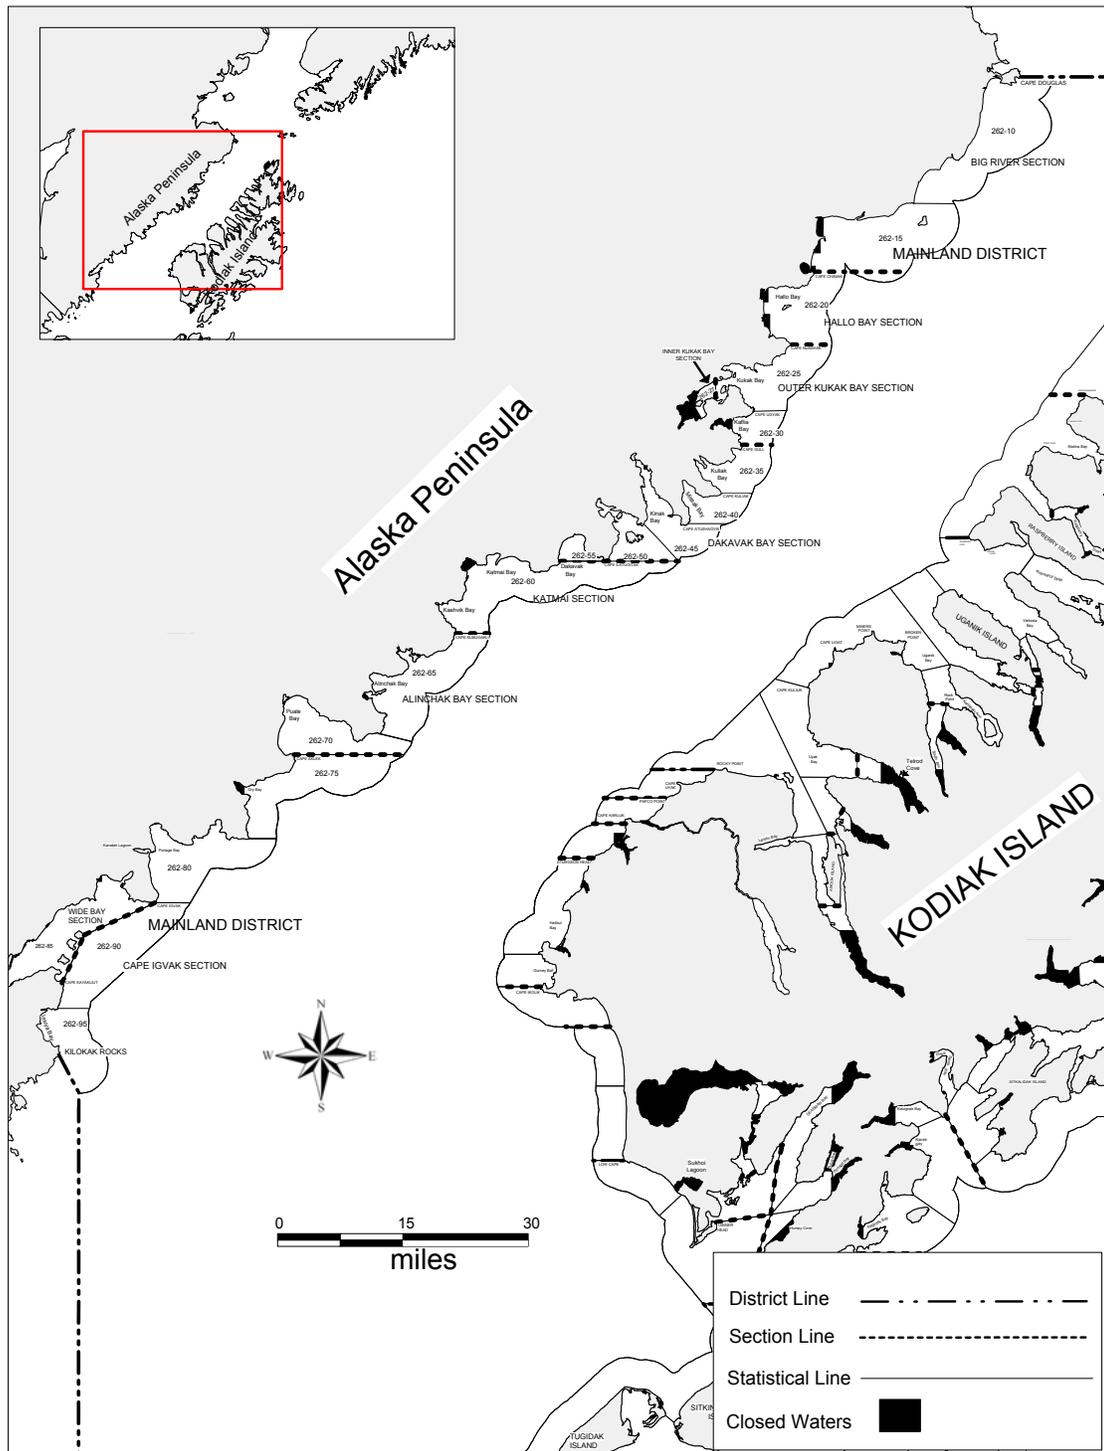

Appendix A4.-Map of the Southwest Kodiak District identifying commercial salmon fishing sections and statistical areas.

Appendix A5.-Map of the Alitak District identifying commercial salmon fishing sections and statistical areas.

**Appendix A6.-**Map of the Northeast Kodiak and Eastside Kodiak Districts identifying commercial salmon fishing sections and statistical areas.

**Appendix A7.-**Map of the Mainland District identifying commercial salmon fishing sections and statistical areas.
